

ADA RAMIREZ

JUNIOR FRONT END DEVELOPER

PROFILE

I am an intrepid professional photographer who decided to make a 180-degree change, entering to a programming bootcamp. JavaScript was the chosen language to be the first one, I found out that in order to learn it, you also need a lot of creativity, just focused differently. In other words, learning a programming language is like a camera, you focus on what is important (the requirements you need to solve), capture the good time (the functions that actually worked), develop from the negative (all the mistakes you made in order to solve the problem), and if things don't work out, just take another shot (one more try, this is your code).
